

 IOA
The logo for IOA features a stylized white graphic of interconnected geometric shapes, resembling a molecular or network structure, positioned to the left of the letters 'IOA'.

LIFEwall

LIFEwall

A Freestanding Mobile Partitioning Unit

LIFEwall is a freestanding mobile partitioning unit that is designed to address the need to spatially delineate larger healthcare treatment zones, while at the same time safeguarding patient privacy and dignity. A fundamental feature of this product is its flexibility in arrangement with ease-of-use when needing planning solutions fast. These partitioning units can be utilized in a multitude of ways; from allowing caregivers the required protection they need for HIPPA compliance, to creating a comfortable personal space for examination, rest, and recovery for patients. Understanding that patient occupancy determines privacy needs, units may be nested together when not in use or pulled apart to organize space.

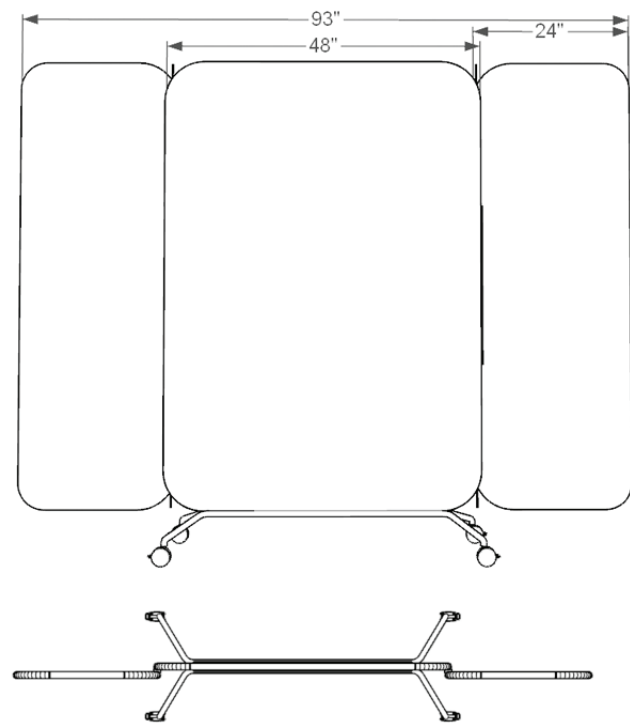

Helping to address issues on the Horizon...

“The design derived from the need in the healthcare environment to create a flexible short term visual privacy solution in a static environment, while allowing for ease of use for the healthcare employee. Understanding the need for privacy in many different environments, be it in healthcare, education, hospitality, etc. can change on a monthly, weekly, daily or eve hourly basis, depending on the activity. This is why **LIFE**wall is valid anywhere.”

- Patricia Gotshall, Designer
