

# Horizon Sleeper Sofa

Interior Design Magazine's "Best of Year" award

Recently, **IOA Healthcare Furniture** developed an award winning sleeper sofa, Horizon, with an impenetrable solid surface platform to combat the potential health risks posed by **infectious diseases**. With healthcare associated infections costing the US between \$35 and \$50 billion dollars annually the need for effective sanitation is evident. The solid surface and metal structure can withstand even the **harshest of cleaners and disinfectants**.

The raised metal base allows for ease of maintenance and sanitation. Its platform features only three upholstered components that are **removable** as well as **replaceable**. The combination of solid surface and ultrasonic vinyl seam welding **lessens the chances of infectious diseases being harbored**.

The Horizon Sleeper Sofa, Interior Design Magazine's "Best of Year" winner, distinguishes itself among current patient room furnishings. It takes an innovative approach that aids the growing concern of **preventing the spread of infectious diseases** while contributing to the wellness and beauty of the healthcare environment.

Helping to address issues on the Horizon...

“With the growing concern over the spread of infectious diseases, this innovative sleeper sofa was designed to help and protect our community at large. I am very honored to be a part of a company that is addressing this important need.”
